

1. In retrospect, what could you have done better to reduce the time you spent solving this homework?

I could have put more effort in understanding efficient polynomial multiplication and division algorithms in terms of how to implement them.

I could have also cut down the time spent on creating private helper functions, as I ended up deleting many of them.

2. What could I (the instructor) have done better to improve your learning experience in this homework?

Nothing.

3. What do you know now that you did not know before beginning the homework?

I now know how the algorithm polynomial long division translates into code.
