1. In retrospect, what could you have done better to reduce the time you spent solving this homework?

I should inferred more from the diagram, which subtly implied that k = arr.Length for when there is no blue color.

2. What could I (the instructor) have done better to improve your learning experience in this homework?

Better emphasizing that k = arr.Length for when there is no blue color would have lessened wasting of time.

3. What do you know now that you did not know before beginning the homework?

I am better at using Dafny, especially with the creating and usage of predicates.
